(54) INTERRUPTION PROCESSING SYSTEM**(57)Abstract:**

PROBLEM TO BE SOLVED: To provide an interruption processing system capable of avoiding performance deterioration also with respect to processing in which the flow of control changes at an unpredictable time such as interruption processing.

SOLUTION: The interruption processing system is provided with an interruption processing program 6 for executing the program of interruption processing in a computer system, a polling processing part 2 which inspects the occurrence of an interruption request by polling anywhere in an optional program and starts the program 6 when detecting the occurrence of the interruption request, an ordinary interruption processing part 7 for starting the interruption processing program by ordinary interruption processing based on the occurrence of the interruption request, a delay processing part which delays the ordinary interruption processing by the processing part 7 by a prescribed time.

本発明は、コンピュータシステムにおいて、割り込み発生検出部と割り込み処理部とを有する割り込み処理システムに関する。
